The following is an examiner's statement of reasons for allowance:

The overall claimed combination of a method, executed in a computer server system of an electronic market system for trading of securities, for managing quotes for a security, the method comprising: receiving by the server computer system from client systems used by market participants, quotes, the quotes including fields to indicate whether the quote is to bid or offer a security, a first size value that indicates a displayable, attributable size amount of the quote and a second size value that indicates an additional quote size that is displayable on displays of client systems, as trading interest in a security, but not attributable to any market participant, and the server computer system calculating and causing a total size of all aggregated quotes to be displayed for each of a plurality of price levels on the client systems is neither anticipated nor rendered obvious by the prior art.

Korhammer (US Patent 6,278,982) and Guterman (US Patent 5,297,031) teach an electronic market system for trading of securities comprising a plurality of client stations for entering quotes for securities; and a server computer that receives quotes from the client stations, aggregates the quotes and causes a current quote window to be displayed on the client systems in

proximity to the aggregated quotes the prior art of record fails to teach an electronic market system for trading of securities including the step of causing a total of all aggregated quotes to be displayed for each of a plurality of price levels on the client systems

The overall claimed combination of an electronic market system for trading of securities in association with a plurality of client systems for entering quotes, the quotes including fields to indicate whether the quote is to bid or offer a security, a first size value that indicates a displayable, attributable size amount of the quote and a second size value, with the first size values of quotes being quotes that are displayable and attributable to a specific market participant, and the second size values being quotes that are displayable but not attributable to a specific market participant, the electronic market system comprising: a server computer, the sever computer configured to: receive the quotes from the client systems; calculate and cause a total size of all aggregated quotes to be displayed on the client system for each of a plurality of price levels; and cause quotes having a first size value to be displayed on displays of the client systems as individual quotes with the first size value for each quote with a market participant identifier on the client systems is neither anticipated nor rendered obvious by the prior art.

Korhammer (US Patent 6,278,982) and Guterman (US Patent 5,297,031) teach an electronic market system for trading of securities comprising a plurality of client stations for entering quotes for securities; and a server computer that receives quotes from the client stations, aggregates the quotes and causes a current quote window to be displayed on the client systems in proximity to the aggregated quotes the prior art of record fails to teach an electronic market

system for trading of securities including the step of causing a total of all aggregated quotes to be displayed for each of a plurality of price levels on the client systems

The overall claimed combination of a client system for entering quotes for securities, the client station comprising: a display configured to render a graphical user interface at which quotes can be entered at a price level, said graphical user interface comprising fields to enter a quote having a first size value that indicates a displayable, attributable size amount of the quote displayable and attributable to a specific market participant, and a second field for entering a second size value that indicates an additional quote size that is displayable but not attributable to a specific market participant, and a computer configured to display a total size of all aggregated quotes for each of a plurality of price levels is neither anticipated nor rendered obvious by the prior art.

Korhammer (US Patent 6,278,982) and Guterman (US Patent 5,297,031, WO 91/14231) teach an electronic market system for trading of securities comprising a plurality of client stations for entering quotes for securities; and a server computer that receives quotes from the client stations, aggregates the quotes and causes a current quote window to be displayed on the client systems in proximity to the aggregated quotes the prior art of record fails to teach an electronic market system for trading of securities including the step of causing a total of all aggregated quotes to be displayed for each of a plurality of price levels on the client systems

The overall claimed combination of a computer program product for rendering a graphical user interface for an electronic market system for trading products, the computer

Art Unit: 3628

program product tangibly embodied on a non-transitory, computer-readable storage device and storing instructions which when executed by a processor cause the processor to: render the graphical user interface having a first portion that displays size values of additional quotes for a plurality of price levels of a product traded in the market, the additional quotes including size values of quotes that are attributable to market participants and size values of quotes that are displayable quotes but are not attributable to any market participants and display on a client system a total size of all aggregated quotes for each of a plurality of price levels is neither anticipated nor rendered obvious by the prior art.

Korhammer (US Patent 6,278,982) and Guterman (US Patent 5,297,031) teach an electronic market system for trading of securities comprising a plurality of client stations for entering quotes for securities; and a server computer that receives quotes from the client stations, aggregates the quotes and causes a current quote window to be displayed on the client systems in proximity to the aggregated quotes the prior art of record fails to teach an electronic market system for trading of securities including the step of causing a total of all aggregated quotes to be displayed for each of a plurality of price levels on the client systems.
